

♦ DATA ANALYTICS & AI/ML ENGINEER

Hi, I'm Akshitha Potharaboina

Final-year B.Tech student in AI & ML with hands-on experience in data analytics, machine learning, and SQL-based business intelligence. Passionate about turning raw data into actionable insights.

TECHNICAL SKILLS

What I Work With

Python

SQL (MySQL)

Data Analytics

Machine Learning

Data Visualization

Pandas

Matplotlib

Seaborn

WordCloud

Exploratory Data Analysis (EDA)

Data Cleaning

Feature Engineering

MySQL Workbench

Excel / XLSX

Jupyter Notebook

Google Colab

Artificial Intelligence

Deep Learning

Git & GitHub

Statistical Analysis

DATA VISUALIZATION · NLP

Spam Email Detection & Visualization

Designed and implemented a data visualization pipeline to analyze and classify spam vs. ham (legitimate) emails, uncovering linguistic patterns and statistical distributions in email datasets.

- Performed exploratory data analysis on a labeled email dataset using Pandas
- Generated bar charts, pie charts, and word clouds to visualize spam patterns
- Identified key vocabulary differences between spam and legitimate emails
- Delivered clean visual outputs (PNG charts) suitable for reports and presentations

Python Pandas Matplotlib

Seaborn WordCloud

Jupyter Notebook

DATA ENGINEERING · INTERNSHIP

E-Commerce Data Cleaning & Preparation

Executed a comprehensive data preprocessing pipeline on a real-world e-commerce dataset, transforming raw, inconsistent data into a clean, analysis-ready format using Python and Pandas.

- Identified and handled missing values, null entries, and duplicate records
- Standardized date formats and validated pricing consistency across the dataset
- Exported a fully cleaned XLSX dataset for downstream analytics workflows
- Completed as Week 1 of the DecodeLabs Data Analytics Internship Program

Python Pandas Google Colab

Excel / XLSX Data Wrangling

EDA · BUSINESS INTELLIGENCE · INTERNSHIP

Sales Exploratory Data Analysis (EDA)

Conducted a full exploratory data analysis on a business sales dataset to uncover revenue trends, product performance, customer payment preferences, and statistical outliers to support data-driven decision-making.

- Identified that Chairs were the highest-selling product category in the dataset
- Analyzed payment method distribution — online payment was the most preferred channel
- Detected high-value revenue outliers using statistical techniques
- Delivered actionable insights into monthly revenue fluctuations and product rankings

SQL · BUSINESS ANALYTICS · INTERNSHIP

E-Commerce SQL Data Analysis

Designed and executed a structured SQL-based analysis on an e-commerce sales dataset using MySQL Workbench, applying relational query techniques to extract key business metrics and revenue insights.

- Wrote optimized SQL queries using SELECT, WHERE, GROUP BY, ORDER BY, COUNT(), SUM(), and AVG()
- Analyzed product-level revenue, calculated average order values, and ranked best-selling categories
- Extracted customer segmentation insights and payment method distributions
- Completed as Week 3 of the DecodeLabs Data Analytics Internship Program
